Self Definition

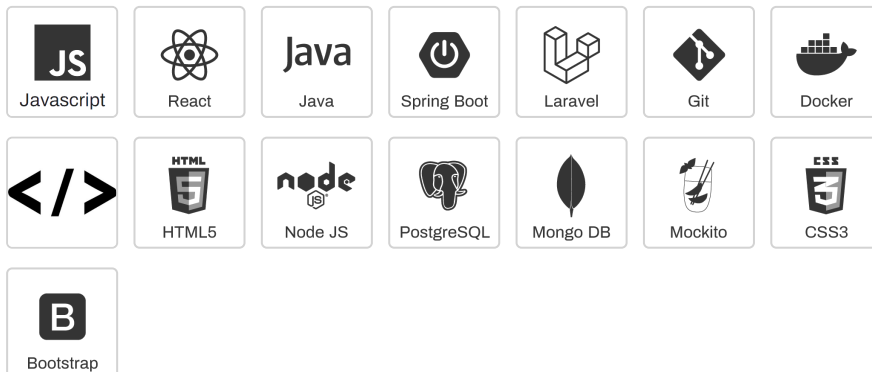

I am a passionate and motivated Full Stack Developer with expertise in Java, Spring Boot, JavaScript, and React. Starting my programming journey at 16 years old with game development, I transitioned to full-stack development a year ago through Codecool, where I refined my skills and discovered my love for building web applications. I love to make new friends, in every scenario where life gets me, while keep the team work as efficient as possible in a job environment. I like to look at the bright side of everything, for me there is no "bad weather" just rainy or cloudy weather. Outside of coding, I enjoy playing the guitar and boxing, which keep me balanced and energized. I am always eager to learn, take on new challenges, and grow both personally and professionally.

Strength

Versatile developer skilled in front-end technologies like JavaScript with React and Tailwind CSS for design, as well as back-end development using Java and the Spring Boot framework. My biggest strengths are my ability to learn quickly and adapt to new challenges. I thrive in dynamic environments, easily picking up new technologies and methodologies. I am highly flexible, able to collaborate effectively across teams, and always eager to tackle complex problems with a solution-oriented mindset. My problem-solving abilities, and proactive approach allow me to contribute meaningfully to projects and drive continuous improvement.

Mentor Opinion

"Throughout the past few months, I've had the opportunity to see how Máté works both alone and in groups. He is highly motivated and throughout his studies he often incorporated extra technologies into his projects to explore new possibilities and refine his skills. His curiosity drives him to deeply understand the tasks at hand, and he consistently forms well-reasoned opinions. At the same time, Máté is open to advice and feedback. His proactive and inquisitive nature makes him an excellent contributor to any team."

Recent Projects

TALEE

<https://github.com/DTZsuzsi/Talee>

A team project with 2 teammates. A Spring Boot and React app where users can create locations, organize events, and apply to them. Ideal for parties or gatherings at any location. Includes Spring Security for login and registration, with Tailwind used for design. Based on my original idea.

SOLAR-WATCH

<https://github.com/CodecoolGlobal/solarwatch-matet2001>

A Java Spring Boot, React app for sun set/rise tracking. Users log in, input a city and date, and receive sun time data. Uses a PostgreSQL database to cache results, reducing API calls for repeated queries. Features Spring Security to restrict access to registered users only. Tailwind was used for design.

NAPSZFERA

<https://github.com/matet2001/napszfera>

A Laravel full-stack webshop for a spiritual teacher. Users could buy lectures, meditations, and audiobooks, with payments handled via Stripe. Purchased items were added to an inventory for streaming or download. Included a blog for product updates and admin controls to manage payments. Due to discontinuation, all client-owned data was removed.

Work Experience

QA Tester (2021 - 2023) — The Wild Gentlemen Kft.

Education

Full-stack Developer (2024 - 2025) — Codecool

high-school graduation (2018 - 2021) — Gábor Dénes Óvoda, Általános Iskola, Gimnázium és Technikum

Spoken Languages

English — Intermediate
